introduce a first component in water so as to emulsify or disburse the first component in the water in a first mixture
10
introduce a second component in water so as to emulsify or disburse the second component in the water in a second mixture, wherein each of the at least two different components are selected from the group consisting of a resin, a polymer, and an oligimer
20
add a UV hardener to at least one of the first and second mixtures
30
mix the first and second mixtures to form a coating
40
apply the coating to an object
50
pre-dry the coating
60
perform a final drying of the coating including at least one radiation treatment using UV light
